

Storedata for Resellers

Profit from the growing demand of Online Backup

IDC forecasts that the market for online backup is emerging and will grow fourfold by 2011. Consumers and small businesses are interested in new methods of protecting their data. Online Backup enables service providers to offer reliable backup services to consumers and SMB customers. The Storedata solution provides easy backup and restore of data from any device, being a PC, laptop or server, over the internet to a secured remote datacenter location.

LOW TOTAL COST OF OWNERSHIP

Storedata provides software that is easy to deploy. The management of the solution is streamlined: the management, administration and monitoring of the backup environment is optimized for a low total cost of ownership.

INTEGRATED WITH MICROSOFT HOSTING PLATFORM

Tested and supported by Storedata, the solution is fully integrated with Microsoft's Hosted Messaging and Collaboration platform. Additionally, leading control panel vendors include support of Storedata in their platform.

SUPPORTED PLATFORMS AND APPLICATIONS

The software supports desktop and laptop backup as well as customer premises server backup. Support for Exchange and SQL servers are included. The client software is available for Windows, Mac and Linux.

Internet Solutions is a hosting and professional service provider that is offering value-added services like Hosted Exchange and online backup through (private label) resellers and direct to the market. Roger King of Internet Solutions: "With Storedata we found our ideal partner, because they offer a very advanced and complete product that is still easy to implement and maintain".

| Features | Benefits |
|----------------------|---|
| <i>Private Label</i> | Give your customers a "single supplier" experience, with your logo on the client interface. |
| <i>Multi-tenant</i> | Offer a private-label reseller model, a popular solution for many Service Resellers in the business-to-business market. |
| <i>Trial Account</i> | Allow trial accounts that accelerate adoption rates, for users to 'try & buy' the software. |

PERFORMANCE AND AVAILABILITY

With the requirements of professional service providers in mind, Storedata is designed for high uptime environments. It can be hosted in a load balanced or clustered environment. Storedata is a scalable solution and allows you to upscale or outscale bandwidth, processor power, memory, database capacity and storage capacity independently.
